Indian Institute of Management Bangalore 2025 – 2028 (expected)
BBA in Digital Business & Entrepreneurship (online programme)

Teoler High School, Jaipur
Class XII (PCM) — 86.2%

EXPERIENCE

Youth4Water Plus — Research Intern
UNICEF-supported Youth for Water Project, implemented by BGVS Odisha

- Researched Jal Jeevan Mission guidelines and Odisha's operation-and-maintenance framework for multi-village piped water supply schemes, mapping how responsibilities are split across state agencies and village-level institutions.
- Compared Indian and international O&M models across four dimensions of sustainability — physical, financial, operational and institutional — to identify where schemes commonly fail after construction.
- Analysed long-term O&M and EPC handover risks, and reviewed SCADA, GIS, IoT and analytics options for remote monitoring of rural water infrastructure.
- Contributed to a hybrid governance and O&M model, and helped structure the team's recommendations and presentations.

PROJECTS

VittamHub — *Early-stage fintech product concept (Founder)* Ongoing

- Identified a trust and information gap between early-stage startups and investors, and defined the target users and the specific decision each side struggles with.
- Developed the value proposition and product concept across startup verification, investor discovery, structured company information and post-investment tracking, and explored the business model.
- Built the product's web presence using HTML and CSS with AI-assisted development.
- Pitched VittamHub at Hackathon 6.0 and advanced through two rounds.

Healthcare Access & Marketing Research — RUHS Hospital, Jaipur — *Independent research project* 2026

- Built a geospatial dataset of 50+ low-income settlements in Jaipur, using coordinate mapping and Haversine distance calculations in Python to rank settlements by relative access to two public hospitals.
- Designed an evidence-based socioeconomic scoring framework in which every figure carries a source and unavailable data is marked as such rather than estimated.
- Tested the project's original "awareness gap" hypothesis against academic literature, healthcare case studies and consulting frameworks, and revised the diagnosis when the evidence did not support it.
- Evaluated 8 hypotheses on healthcare-seeking behaviour using the Health Belief Model and Theory of Planned Behaviour, and designed a quasi-experimental pilot with sample-size and power calculations under a ₹10,000 budget constraint.
- Produced a 20,000-word research report and a structured marketing strategy using MECE issue trees, segmentation and logic models.

Website Development — DEV Herbal Products — *Small business website*

- Built a product website for a small homemade herbal-goods business covering soaps, incense, hand wash, dish wash and liquid detergent, using HTML and CSS.

ACHIEVEMENTS & ACTIVITIES

- Selected for two IIM undergraduate programmes — B.S. at IIM Sambalpur and BBA (online) at IIM Bangalore.
- Advanced through two rounds at Hackathon 6.0 with VittamHub.
- Runner-up (team) at Aarohan Inter-IIM Sports Fest.
- Represented Pratapgarh (RCA U16), Rajasthan in the Rajasthan State U16 Cricket Championship 2021–22; played competitive cricket at school, club and inter-institutional levels.

SKILLS

Research & Analysis: Research methodology, data analysis, geospatial analysis, hypothesis testing, consumer research, strategic problem solving

Business & Product: Entrepreneurship, product thinking, business strategy, market and customer understanding

Marketing: Marketing strategy, social media marketing

Technology: Python, HTML, CSS, web development, AI-assisted development, generative AI tools

Tools & Other: Microsoft Excel, PowerPoint, Canva; presentation and pitching, leadership, communication

Interests: Entrepreneurship, product, startups, technology, marketing, economics, cricket
